

*Occupational Health & Safety (OH&S) standard,
ISO 45001, has been published*

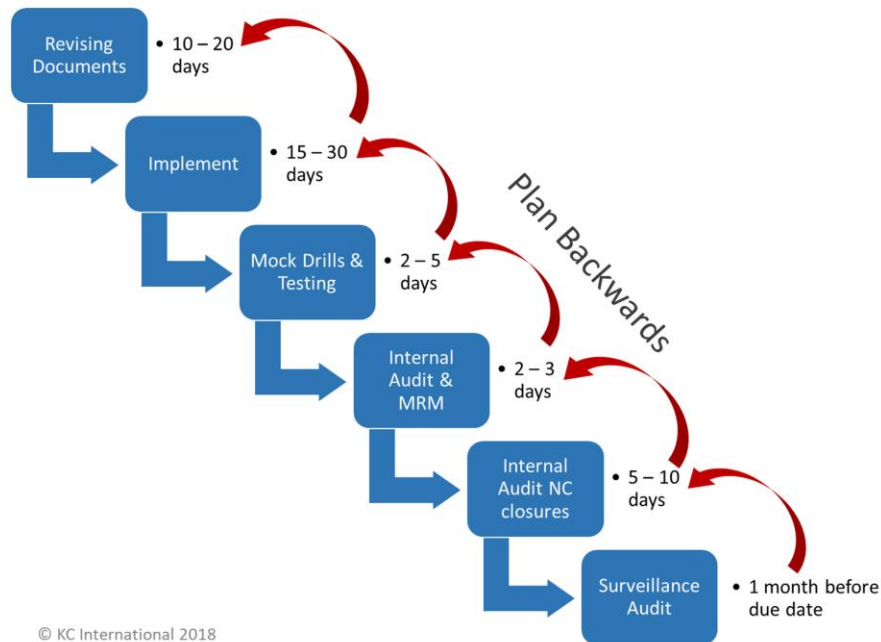

Your current
OHSAS 18001:2007
Certification will need
to be migrated to
ISO 45001:2018
since **OHSAS 18001** will
be withdrawn

While, there will be a three-year migration period from the date of publication, it is advisable to migrate early, for the following reasons:

- **Save costs** of separate surveillance audit and transition audit. Implement the new ISO 45001:2018 now and get it audited/certified at the time of your next surveillance audit. So there will be no additional costs of an additional transition audit.
- **Integration** with requirements of ISO 9001:2015 and 14001:2015 has become **easier**. The high level requirements that have been introduced in ISO 45001:2018 are similar to those of 9001:2015 and 14001:2015.
- **Acceptability** of ISO 45001:2015 is much more than OHSAS 18001:2007. Early adopters of the new ISO standard will have a **competitive advantage** when

tendering for projects or sending quotations to clients.

- **Easy implementation.** The ISO 45001:2015 is more business oriented, does away with rigid paper works and provides better solutions for occupational health and safety.

Upgrade your certification to [ISO 45001](#) with our expertise smooth transition. Get complete detail about the standard
